

To Avoid
Developmental
Orthopaedic
Disease (DOD)
in Growing Foals:

- 1. Aim for steady growth patterns avoid sudden growth spurts and "catch up" growth periods, particularly after periods of confinement when exercise has been reduced.
- 2. Ensure young foals, weanlings and yearlings receive balanced mineral nutrition with an adequate and balanced intake of calcium, phosphorus, copper, zinc, magnesium, selenium, iodine and the vitamins A, D and E. A calcium and trace mineral supplement, such as Healthy Bones can be added to a growing horse's rations to supplement inadequate calcium levels in grain or cereal hay based diets. Additionally a balanced vitamin and mineral supplement such as Kingdom Nutrition's Supreme Multi-Vitamin Supplement will provide over 98% of the recommended daily intake of a whole range of other vitamins and trace minerals including copper, to augment the natural levels the horse can obtain from its basic ration.
- 3. Nutrition for the mare particularly during the last 3 months of pregnancy. Deficiencies in mineral intake during this time can lead to deficiencies in the unborn foal. Healthy Bones is the supplement of choice for pregnant and lactating mares.

Healthy Bones contains only USP standard ingredients. We use only a highly purified calcium carbonate with the lowest lead content of any calcium supplement available.

#### INGREDIENTS:

Calcium Carbonate (Usp)
Calcium Phosphate (Usp)
Magnesium Oxide
L-Lysine
L-Threonine (Usp)
DI-Methianine (Usp)
Vitamin C
L-Proline
L-Arginine
Sugar
Vitamin D3
Vitamin K
Sodium Metasilicate
Sodium Borate
Artificial Flavors

#### Recommended Daily Feeding

Store Product in cool dry place. Keep container tightly closed. Follow feeding instructions.

## CAUTION: KEEP OUT OF REACH OF CHILDREN

Always check with your veterinarian before changing your horse's diet.
